

Recruiting task

Task Description

- Implement an AI Assistant with Java Frameworks and

Provide a chat interface

- Integrate the following knowledge sources:

o Local Vector database pgvector/pgvector:pg17 populated with CDQ

Product information (RAG, convert to vector embeddings, take plain text from here <https://www.cdq.com/products/cdq-fraud-guard>)

o Remote free REST Service ("https://restcountries.com/") → write own mcp server

o Local free MCP server (<https://mcpservers.org/servers/semdin/mcp-weather>)

- Use a local model qwen3:4b with Ollama
- Provide tests
- Provide answers to the following questions

o What is the capital city of Germany?

o What is the temperature currently in Munich?

o What is the temperature of the capital of Germany currently?

o What do you know about Berlin?

o <your own questions to show off>

- Out of scope:

o No solution for long/short-term memory required

Task requirements

- Provide the source code of the AI Assistant in a public repository of your choice
- Run the AI assistant and provide the answers
- Please provide a README that describes how to run the service and execute

the tests

- Using AI is explicitly allowed; explain how you used AI to fulfill the task
- If you were not able to fulfill a task, then explain why
